

As you look at these ratings & select a Granville wilt-resistant tobacco variety, remember:

- Ratings were calculated from results in multiple field experiments over multiple years.
- “% Survival” = the % of the original plant stand remaining in untreated soil at ~ 2nd harvest.
- “Granville Wilt-Yield Index” = relative yield from 2006 & 2007 variety tests in Virginia weighted by % Survival.
- A “Granville Wilt-Yield Index = 100” means a yield equal to the average yield in the 06 & 07 variety tests without disease.
